

GPS Coordinates with Google Maps

Build the Perfect API

Learn modern design techniques for building the perfect API.

Latitude and longitude of an address

Convert an address or a place to lat long: fill the address field and click on "Get GPS Coordinates" to display its latitude and longitude. Read the result provided by the converter on the left column or directly on the **Google Map**.

Find an address from its GPS coordinates

Address from decimal coordinates: fill the decimal GPS coordinates and click on the corresponding "Get Address" button.
Address from sexagesimal coordinates: fill the sexagesimal GPS coordinates and click on the corresponding "Get Address" button.

Latitude, longitude and address of any point on Google Maps

Click directly on the map to get an address and its GPS coordinates. The latitude coordinate and the longitude coordinate are displayed on the left column and on the map.

GPS Map

Create a free account (</register/>) to bookmark your favorite places. Once logged in, just click on the star inside the infowindow on the map to add the point to your bookmark list (you can find it under the map on any page).
This is especially useful if you look for specific places on a device like your desktop, in order to use them later on with your mobile or your tablet. Just login and your points of interest will be available on all your devices (and on all the pages).

Geolocation

We opted to center the map on your GPS location when possible, using the **html5 geolocation** feature.
Your latitude and longitude are provided by your browser, but we can't access them without your consent. We do not keep any record of the location of our users, so feel free to allow the geolocation feature if you find it convenient. Visit this page (</geolocation>) to see how to enable geolocation with all major browsers.
If you don't want to share your geolocation, the map will just be centered on a default GPS point.
